

# Quick introduction to Sitecore Bugger!

---

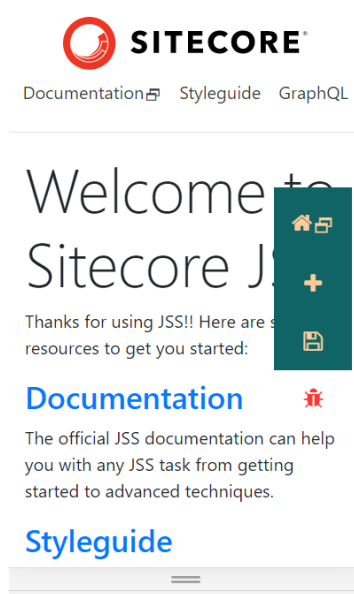

## Sitecore Bugger

Sitecore bugger is a feedback and bug management tool for all type of Sitecore web sites such as legendary, JSS and SXA.

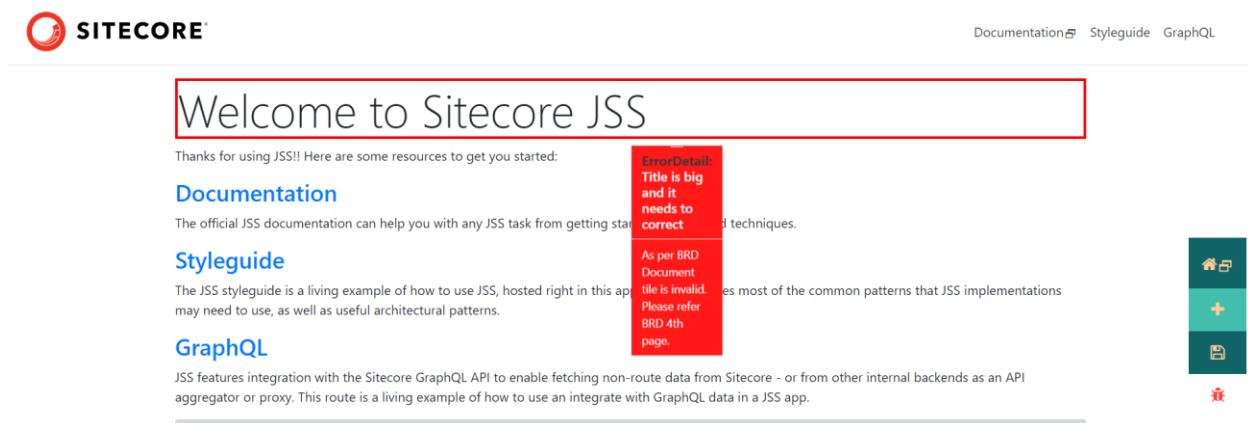

## How it works

**Sitecore bugger is a simple tool on top of Sitecore websites.**

Simply tester/audience can point the issue or feedback in a Sitecore website itself.

Logs the feedback/bug with basic information's. Ex: Title, Information, Type, Severity, Owner and Assignee

**SITECORE**

## Welcome to

Thanks for using JSS!! Here are some resources to get you started.

**Documentation**  
The official JSS documentation can help you get started.

**Styleguide**  
The JSS styleguide is a living example of how you may need to use, as well as useful architectural patterns that JSS implementations can follow.

**GraphQL**  
JSS features integration with the Sitecore aggregator or proxy. This route is a living example of how you can use JSS to integrate with other internal backends as an API.

**This app is a boilerplate**  
The JSS samples are a boilerplate, not a finished application. You can customize it to your own requirements. The app is yours.

**How to start with an empty app**  
To remove all of the default sample content, run the following commands in your terminal:

1. Delete /src/component/Styleguide
2. Delete /sitecore/default/content/00000000-0000-0000-0000-000000000000
3. Delete /data/component/content
4. Delete /data/content/Styleguide
5. Delete /data/metadata/Styleguide
6. Delete /data/sitecore/yes

### Error details

**Error title**  
Title is big and it needs to correct ✓

**Detailed error description (Html allowed)**  
As per BRD Document title is invalid. Please refer BRD 4th page. ✓

**Error type**  
Functional ✓

**Error Severity**  
Low ✓

**Error status:**  
Re open ✓

**Assigned to:**  
andsinindia@gmail.com ✓

**Device details - 1**

Upload screen shot... < 700 KB

 Welcome to Sitecore JSS  
Screen shot of an issue.

Developers can get complete information's about the logged items.

### Component details (Rendering, Placeholder and Data Sources)

Sitecore component details - 1

```

rendering : {0E838996-8647-40E6-B181-56A4786DA130}.

datasource : {012A3533-9C68-4395-87B3-071F4EC98B3D}.

placeholder : SCBTestSiteHeader.

renderer : View:
/Views/SCBTestSite/SCBTestSiteHeader.cshtml.

```

### Screenshot

Welcome to Sitecore JSS

Screen shot of an issue.

### Device details

Device details - 1

```

chrome : true.

version : 81.0.4044.138.

versionNumber : 81.

win : true.

desktop : true.

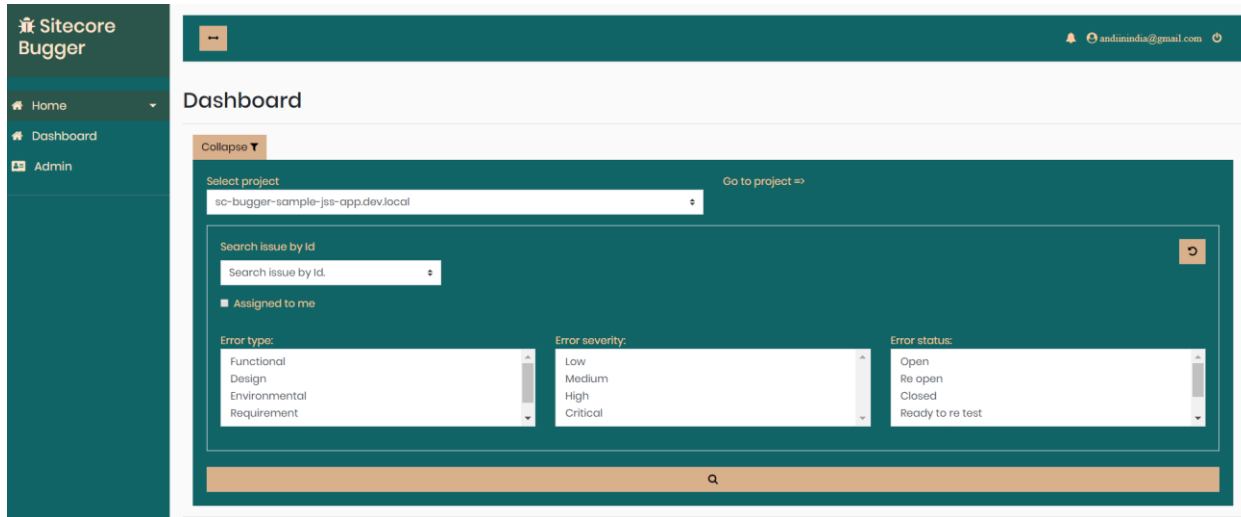

webkit : true.

name : chrome.

platform : win.

```

Manage bugs/feedbacks from dashboard. Ex: Filtering the issue by various options and download as a excel.

Documentation

Activate Windows

Link is wrong

Go to Settings to activate Windows.

Reproduce issue by single click. This will redirected to the page and highlighted the bug.

## Welcome to Sitecore JSS

Thanks for using JSS!! Here are some resources to get you started:

### Documentation

The official JSS documentation can help you with any JSS task from getting started to advanced techniques.

### Styleguide

The JSS styleguide is a living example of how to use JSS, hosted right in this app. It demonstrates most of the common patterns that JSS implementations may need to use, as well as useful architectural patterns.

### GraphQL

JSS features integration with the Sitecore GraphQL API to enable fetching non-route data from Sitecore - or from other internal backends as an API aggregator or proxy. This route is a living example of how to use an integrate with GraphQL data in a JSS app.

### This app is a boilerplate

The JSS samples are a boilerplate, not a library. That means that any code in this app is meant for you to own and customize to your own requirements.

Want to change the lint settings? Do it. Want to read manifest data from a MongoDB database? Go for it. This app is yours.

ErrorDetails:  
Title is big  
and it  
needs to  
correct  
  
As per BRD  
Document  
tile is invalid.  
Please refer  
BRD 4th  
page.

Platform Owner/Admin can enable/disable the every site in Sitecore.

Submit

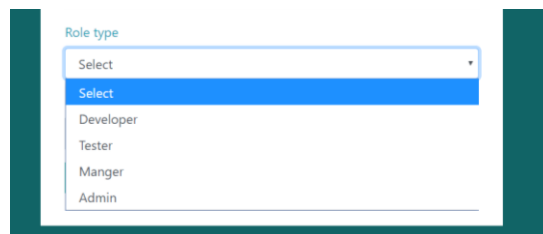

**Dedicated user management portal available for managing roles. Ex Login, signup and reset user. This defines the workflow and roles with the tool.**

The image displays two side-by-side screenshots of the Sitecore Bugger user management portal. Both screens have a dark teal background with the Sitecore Bugger logo at the top left.

**Login Form:** The form is titled "Login" and is centered on a white background. It contains two input fields: "Email:" and "Password:". Below the password field is a green "Login" button. At the bottom right of the form, there are links for "Sign-up" and "Forgot password".

**Sign up Form:** The form is titled "Sign up" and is centered on a white background. It contains four input fields: "Username:", "Email:", "Password:", and "Registration Code:". Below the password field is a dropdown menu for "Role type" with "Developer" selected. At the bottom left of the form is a green "Register" button.

This image shows a close-up of the "Role type" dropdown menu from the sign-up form. The dropdown is open, showing a list of roles: "Select", "Developer", "Tester", "Manger", and "Admin". The "Select" option is currently highlighted in blue.

## Benefits to the roles

### Management

- Complete free of cost.
- No additional bug management tool needed.
- Mange and browse bugs by filters.
- Download excel report.

### Developer

- Reduce a time analyzing the bug component. Logged bugs narrow down with the component details such as Page of an issue, which rendering, data source, place holder details and screen shot of an issue.
- Reduce interaction with tester.
- Easy to reproduce the issue.

### Testers/Audience

- Can log the device details without worrying about versions and type. Le the Sitecore bugger will log.
- Auto screen shot / Manual upload screen shot.
- Sitecore site itself they can log the bugs/Feedback.

### Admin

- Enable/Disable the Sitecore bugger against every site with ease.
- Archive the closed project.
